PCE BOOM TRUCKS

CUSTOM BUILT BOOM TRUCKS AVAILABLE

ALL IN ONE COMPACT, DRIVEABLE UNIT

**Agitator, Feeder Pump,
& High Pressure Pump**

EQUIPMENT

Hose Carts

Pump Trailers

Applicator Bars

Boom Trucks

Industries

PCE designed the boom truck to reach into a deep pit, lagoon, or slurry store using a drivable, self contained unit with little set up time. With no hoses to connect or disconnect, hydraulically set the boom, attach mainline hose, and begin pumping.

How it works

A low pressure feeder pump/agitator (Houle® Super 150) is hydrostatically driven by one diesel motor and another motor drives a high pressure pump (Cornell® 4NHTB). The feeder pump has hard hose plumbed to the high pressure pump, eliminating any hoses to disconnect or reconnect.

Specifications

These trucks can be built with many different setups and booms. All three of PCE's are different due to the truck style and specific uses for the truck.
